Name: Lainez Ricardo

FRONTEND DESIGN ANALYSIS

Based on UI Design, Cognition, Information Organization, and Page Layout Slides

1. ANALYSIS OF THE BURGER KING ECUADOR WEBSITE

1.1. Visual Framework

The Burger King website clearly applies a Visual Framework pattern:

- Consistent use of brand colors (red, yellow, white).
- Repeated layout structure across pages (header, main content, footer).
- Uniform typography and visual language.

This consistency allows users to maintain orientation across the site, which aligns with the slide definition of a Visual Framework

1.2. Center Stage Pattern

The main interactive content occupies the largest and most prominent area of the screen.

Secondary elements such as navigation menus and legal links are visually subordinate.

This is a clear implementation of the Center Stage pattern, guiding the user's attention to the primary goal

1.3. Visual Hierarchy

The frontend strongly reflects the Visual Hierarchy principles described in the slides:

- Large product images act as primary focal points.
- Bold typography emphasizes titles and promotions.
- Supporting text is smaller and lower contrast.

Users can infer content importance solely from layout and visual weight

1.4. Grid of Equals

Product listings are organized in uniform grids, where:

- Each product card follows the same structure.
- Visual weight is evenly distributed.
- Items are easy to compare.

This matches the Grid of Equals pattern

1.5. Responsive Disclosure

The interface does not expose all information at once:

- Users move from categories to products step by step.
- Details appear progressively as navigation advances.

This reflects Responsive Disclosure, reducing cognitive overload and aligning with human memory limitations

1.6. Cognitive Principles and User Behavior

The frontend design supports several behavioral patterns described in the slides:

- Instant Gratification: immediate access to promotions and ordering actions.
- Chunking: grouping products by category.

- Spatial Memory: stable navigation placement.

1.7. Interface Idiom and Metaphor

The site uses a clear E-commerce / Restaurant interface idiom:

- Menu-based navigation.
- Product cards resembling physical menu items.

The metaphor is consistent and not mixed

2. ANALYSIS OF THE BOCATTO VALLEY WEBSITE

2.1. Visual Framework

The Bocatto Valley frontend demonstrates a consistent visual system:

- Harmonized color palette.
- Clean typography.
- Repeated layout logic across sections.

The design follows the Visual Framework principle

2.2. Center Stage

Primary content such as branding elements and featured sections occupies the central area of the page.

However, calls to action are more subtle compared to Burger King.

The Center Stage pattern is present, but with lower visual intensity.

2.3. Visual Hierarchy

The hierarchy is built using:

- White space.
- Subtle font scaling.
- Minimal contrast differences.

While this creates a clean and elegant interface, the hierarchy is less explicit, which may increase cognitive effort for low-motivation users

2.4. Titled Sections

Content is divided into clearly separated blocks with distinct titles.

Each section represents a logical unit of information.

This aligns with the Titled Sections layout pattern.

2.5. Liquid Layout

The layout adapts smoothly to different screen sizes.

Elements resize proportionally as the viewport changes.

This is a direct application of the Liquid Layout pattern.

2.6. Responsive Enabling

Some interactions and content become available only after user navigation.

The interface guides users progressively rather than exposing everything at once.

This reflects Responsive Enabling

2.7. Cognition and Attention

The frontend design respects cognitive constraints by:

- Limiting visual noise.
- Maintaining focus on one primary content area at a time.
- Favoring recognition through visuals.

This supports the Locus of Attention principle.

COMPARATIVE FRONTEND SUMMARY.

Aspect	Burger King	Bocatto Valley
Visual Framework	Strong	Strong
Center Stage	Very dominant	Moderate
Grid of Equals	Clearly applied	Limited
Titled Sections	Partial	Strong
Responsive Disclosure	Strong	Moderate
Instant Gratification	High	Low
Cognitive Load	Low	Moderate
Frontend Goal	Transaction-focused	Experience-focused
