Product Backlog

1. Feature: Digital Menu Catalog

- **Description:** The publicly visible platform for exploring the food and beverage offerings, and a panel for the administrator to manage inventory.
- **Details:**
 - Products must be organized into logical categories (e.g., Main Courses, Desserts).
 - Each product must display an image, description, price, and ingredients.
 - Administrators must be able to Create, Read, Update, and Delete (CRUD) products and categories.

2. Feature: User Authentication and Access Control

- **Description:** The security module that allows users to securely register and log in, and distinguishes between the views and permissions of a **Client** and an **Administrator**.
- **Details:**
 - Registration must require a unique email and store the password securely (hashing).
 - Administrators must be able to manage existing users and assign roles.
 - The system must offer secure "password recovery" functionality via email.

3. Feature: Cart and Checkout

- **Description:** The essential purchase tool that allows customers to accumulate and manage products before confirming the order.
- **Details:**
 - Users must be able to modify quantities, remove items, and view the updated subtotal in the cart view.
 - The cart must dynamically calculate taxes and apply discounts (from Feature 8).

- When empty, the cart must display a friendly message indicating no items.

4. Feature: Online Payment Integration

- **Description:** Secure mechanism for processing financial transactions through external payment gateways (e.g., Stripe/MercadoPago).
- **Details:**
 - Transactions must be secure, using encryption and processed over HTTPS.
 - In case of payment failure, the order status must revert to "Pending".
 - A digital receipt must be automatically generated upon successful payment.
 - The payment gateway must be configurable by the Administrator (e.g., change credentials, enable/disable).

5. Feature: Reservation System

- **Description:** Facilitates customers reserving tables at the restaurant and provides the administrator with tools to manage and organize these reservations.
- **Details:**
 - The system must prevent overlaps: the same table cannot be reserved in the same time slot.
 - An automatic confirmation email must be sent to the user upon successful reservation.
 - Administrators must be able to cancel, reassign, or modify reservations from the panel.
 - Table and time slot availability must be configurable by the Administrator.

6. Feature: Administrative Dashboard and Analytics

- **Description:** A high-level interface for the Administrator offering a comprehensive, analytical view of sales, inventory, and business activity.
- **Details:**
 - The Dashboard must display sales reports filterable by day, week, and month.
 - The system must generate automatic visual alerts for products with low stock.

- It must be possible to export sales or activity reports to standard formats like CSV or PDF.
- The Dashboard must include a summary of the latest reservations and pending comments for moderation.

7. Feature: Meal Customization and Allergies

- **Description:** Allows customers to modify their dishes (e.g., remove ingredients) and warns them about potential allergens based on their preferences or the product composition.
- **Details:**
 - Ingredients must be linked to each product to enable customization and warnings.
 - The dish price must recalculate dynamically if paid ingredients are added or removed.
 - The system must display warnings if an ingredient in the dish is an allergen saved in the user's profile.

8. Feature: Promotions and Loyalty Program

- **Description:** Implements incentive mechanisms like discount coupons and a points system to reward customer loyalty.
- **Details:**
 - Coupons must be validated (validity, single/multiple use) before being applied at checkout.
 - Loyalty points must accumulate in the user's profile after each successful purchase.
 - Administrators must have an interface to create, edit, and manage promotional offers and coupons.

9. Feature: Customer Reviews and Ratings

- **Description:** A feedback module that allows users to rate and leave comments on products, with moderation tools for the administrator.
- **Details:**
 - Ratings and reviews must be limited to one per client per product to prevent spam.

- The average rating must be automatically calculated and displayed under each product.
- Administrators must be able to approve, reject, or delete comments pending moderation.
