- Llumiquinga Ariel
- Santi Jeancarlo

Feature prioritization

Phase 1: Foundations and Content Management (week 1-2)

- **Phase Objective:** To establish the product database (Content) and the security system for administrative access.
- **Week 1:**
 - **Feature Focused: Feature 2 – Digital Menu Catalog**
 - **Note:** This week is critical for launch readiness, as it defines what is being sold (Product CRUD).
 - **Objective:** Have the Administrator's CRUD functionality and the basic public view of the menu implemented.
- **Week 2:**
 - **Feature Focused: Feature 1 – User Authentication and Access Control**
 - **Note:** Security and user differentiation are the next essential pillar, allowing the Admin (for the Catalog) and the Client to operate.
 - **Objective:** Complete the secure login/registration flows and establish the role permission system (Client/Administrator).

Phase 2: Central Business Flow (week 3)

- **Phase Objective:** To enable the main transaction mechanism (purchasing) of the system.
- **Week 3:**
 - **Feature Focused: Feature 4 – Cart and Checkout and Feature 5 – Online Payment Integration**
 - **Note:** These features are grouped because one is unusable without the other. The Cart defines the amount, and Payment processes it.
 - **Objective:** Have a functional end-to-end purchase flow (from product selection to successful payment in *sandbox* mode).

Phase 3: Management and Value Tools (week 4)

- **Phase Objective:** To add the second key service (Reservations) and provide the Administrator with the essential monitoring tool (Dashboard).
- **Week 4:**
 - **Feature Focused:** **Feature 6 – Reservation System** and **Feature 9 – Administrative Dashboard and Analytics**
 - **Note:** Reservations are implemented to manage physical space, and simultaneously, the Dashboard is created to monitor both new reservations and sales from Phase 2.
 - **Objective:** Have the reservation system operating with non-overlapping logic, and the Dashboard interface displaying sales and activity reports.

Phase 4: Enhancements and Loyalty (week 5)

- **Phase Objective:** To implement value-added functionalities, user experience improvements, and marketing strategies.
- **Week 5:**
 - **Feature Focused:** **Feature 7 – Customer Reviews and Ratings, Feature 8 – Promotions and Loyalty Program, and Feature 3 – Meal Customization & Allergies**
 - **Note:** This week is for polishing. These functionalities depend on the stability of Phases 1, 2, and 3, as they integrate into the Catalog, Cart, and Authentication.
 - **Objective:** Integrate all key user experience and marketing improvements (customization, coupons, and reviews) and perform a final end-to-end integration test.
