Rubric

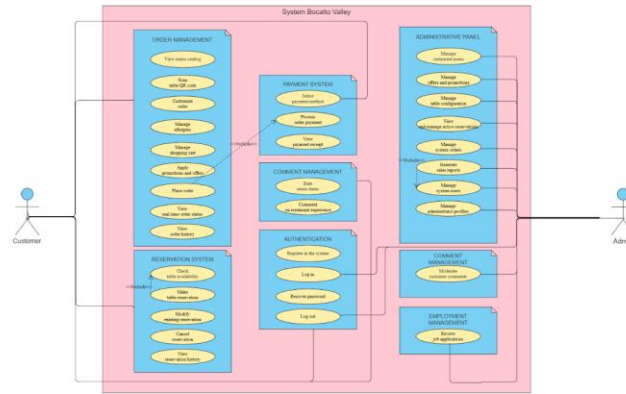

ARTIFACT		EVAL	OBSERVATIONS
Feature , Req 10		7/10	They only have 5 functionalities
Design	Architecture	8/10	Don't have Bowser and ports, and dont specify the cloud server
	Use case	7/10	Its good, but is confusing the way that the lines are structured; also, it lacks certain actors like employees
	Class diagram	7/10	The way that any of the classes is incorrect, they should have it clearly
URI	Design 10	7/10	They should improve the design, the uris are just names, they don't have the details of the URI.
	Functionality	/30	They are functional, but there should be more business rules
DB 10		9/10	It is correctly structured, but lack elements
Security 10		11/10	

Evidence

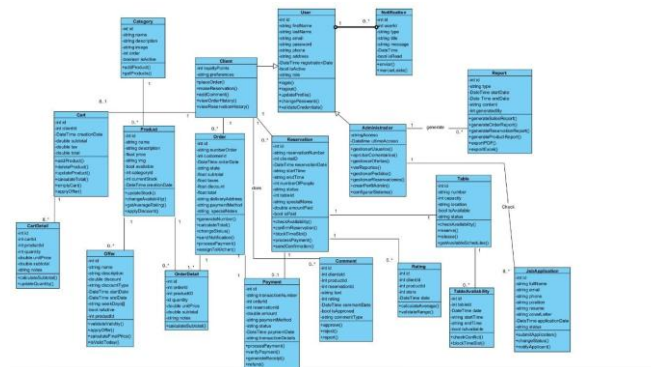

Feature , Req	• As an admin, I want to see daily sales, best-selling items, and stock levels. • As an admin, I want to moderate customer reviews.	• Dashboard displays KPIs and sales graphs. • Low-stock alerts appear when below threshold.		
	• As a customer, I want to remove ingredients if I have allergies. • As a customer, I want to add extras (cheese, sauce) to personalize meals.	• A modal lets users mark ingredients to remove or add. • Prices recalculate dynamically. • Allergens generate system warnings.	• As a customer, I want to view the full menu with images and prices to decide what to order. • As a customer, I want to filter by category or tags such as vegan or spicy.	• When visiting '/menu', the page shows product cards with name, price, and photo. • Filters correctly display selected categories.
	• As a customer, I want to add products to my cart and checkout. • As a staff member, I want to see active orders and update their status.	• Cart shows totals and order summary. • Order stored in database with status 'Pending'.		

		• As a customer, I want to pay online securely. • As a customer, I want to use discount coupons or loyalty points.	• Coupon codes apply discounts before payment. • Successful payments change order to 'Approved' state.
Design	Architecture	• Lainez Ricardo • Llumiquinga ariel • Santi Jeancarlo	WEB APPLICATION ARCHITECTURE DESIGN  The diagram illustrates a web application architecture design. It is divided into three main sections: FRONT-END, BACK-END, and DATABASE. The FRONT-END section contains icons for HTML, CSS, and JS. The BACK-END section contains icons for Express JS and node. The DATABASE section contains the mongoDB icon. Arrows indicate the flow of data between these components. Additionally, there is a section labeled API'S which includes the SRI logo and the Google Maps API icon.

Use case

Class diagram

URI	Design 10	POST - Calculate custom price POST https://bocatto.onrender.com/api/products/1/calculate-custom-price  The screenshot shows a REST client interface with the 'Body' tab selected. The request body is a JSON object: <pre>{ "removedIngredients": ["cebolla", "tomate"], "addedExtras": [{ "name": "queso extra", "price": 1.50 }, { "name": "bacon", "price": 2.00 }]}</pre>. The response status is 200 OK, and the response body is a JSON object: <pre>{ "success": true, "priceBreakdown": { "basePrice": "8.50", "removedIngredientsDiscount": "0.00", "extrasPrice": "3.50", "totalPrice": "12.00" }}</pre>
	Functional ity	
DB 10		 The screenshot shows a database schema for 'FastFoodApp'. It lists several collections: areas, carts, menus, offers, products, reservacions, and users.
