Feature	Objective	Key User Stories	Acceptance Criteria	Main APIs / Data
1. Digital Menu Catalog	Display the complete food and drinks catalog with images, prices, and filters.	• As a customer, I want to view the full menu with images and prices to decide what to order. • As a customer, I want to filter by category or tags such as vegan or spicy.	• When visiting '/menu', the page shows product cards with name, price, and photo. • Filters correctly display selected categories.	GET /api/products GET /api/products?category=DB: products(id, name, description, price, image_url, category, tags[])
2. Meal Customization & Allergies	Allow users to add/remove ingredients and store allergy preferences.	• As a customer, I want to remove ingredients if I have allergies. • As a customer, I want to add extras (cheese, sauce) to personalize meals.	• A modal lets users mark ingredients to remove or add. • Prices recalculate dynamically. • Allergens generate system warnings.	GET /api/products/:id/config POST /api/users/:id/allergies DB: ingredients, product_ingredients, user_allergies

3. Admin Dashboard	Allow administrators to manage inventory, reviews, and view analytics.	• As an admin, I want to see daily sales, best-selling items, and stock levels. • As an admin, I want to moderate customer reviews.	• Dashboard displays KPIs and sales graphs. • Low-stock alerts appear when below threshold.	GET /api/admin/metrics PATCH /api/inventory GET /api/reviews DB: inventory, reviews, reports
